Wordle Help

When launching the game, the user is supposed to log in, if the user does not have an account it needs to create an account and then log in.

Once they log in, you will see the game. The rules of Wordle are simple, you have 6 attempts to guess the word.

The user input can be received via keyboard or with our digital keyboard so that the user can click their desired letter.

After inputting a 5-letter word and clicking enter, if the word does not exist, Wordle will not allow the user to make that one of the 6 attempts, forcing the user to choose a different word.

Once the user enters a valid word, Wordle will indicate which letters of the word are wrong by highlighting them in gray, if they are correct but in the wrong position they will highlight them in yellow, and if the user guessed correctly the letter and position will be green.

If the user misses all the attempts, Wordle will show a message indicating that the user has lost and it will show the correct word as well.

If the user guesses correctly, we will show you a surprise. The user will have to win to find out.

Wordle has also a menu, that when click will show a menu that has statistics, which will show the user the game statistics.

The menu also has modes that will let the user change between light and dark modes. The menu has a Help section, which will open up this exact document.

Finally, a logout option to log out of the account and sign in with another one if that is what the user wants.
